

# Collaborate with a cardiologist on all your cardiac cases for the best outcomes

The new CardioPet™ ECG Device  
makes it easier than ever

**Consulting with a cardiologist helps you identify cardiac disease and assists you with treatment plans and follow-up recommendations.**

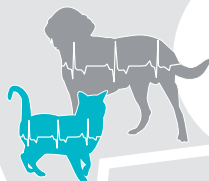

- Including a radiograph with your electrocardiogram (ECG) helps to better determine the cause of a cough or respiratory issues when a murmur or underlying cardiac disease is present.
- Including an echocardiogram with your ECG provides more information on the underlying structure and function of the heart as well as evaluating the pericardial space.
